

Why Vaccinate?

Before vaccines, each year:

**Vaccines
Save Lives**

37,000
people
paralyzed
by polio

15,000
people
died of
diphtheria

70,000
children
hospitalized
with rotavirus

Vaccines contain only a **tiny** amount of the germs that cause the body's **immune response** compared to what your baby encounters each day.

There Are **NOT Too
Many Shots At Once**

**Vaccines
Are Safe**

The U.S. currently has the **safest, most effective** vaccine supply in its history. There is **NO** scientific link to autism.

While diseases like **measles** and **polio** are not common in the U.S., they are common in other parts of the world and sick people can bring them to the U.S.

**Diseases Are Just
A Plane Ride Away**

**Fewer Missed
School Days**

A child who has not been vaccinated may be **excluded** from school if there is a disease outbreak.
